What's New In BLM - Shipping?

BLM - Shipping allows you to get a database of information about vessels and their positions in real-time. You can receive information about vessels making deliveries or moving into places where you have interest. You will be able to see the vessel's name, berth, registration, position, speed, direction, and other details. The application includes AIS (Automatic Identification System) information and messages from the remote-controlled stations. In addition to this information, you can also get the company information, name of the ship owner, list of the ship's officers, list of the flag and the country of registration. Moreover, the application provides the lists of the provided services for each vessel, such as insurance, deliveries, cargo transportation, total capacity of the tankers, bunkers, containers, passenger transportation, engineering, stores and others. The user is also provided with graphical details of each company's map. Furthermore, you can view the maps of the world, where you can see the list of all the ports at a glance. The data that you receive are provided on the world map, where you can mark your position and see the vessels around you, get the positions of the other vessels on the map, get the names of the companies and merchants, get the coastal city names and the list of the terminals. BLM - Shipping's interface is intuitive, the functions are easy-to-use, and the navigation is clear. After the registration process is completed, you will get your personal 'Shipping Hub' where you can have a continuous access to the information about the vessels. The application provides multilingual interfaces for 22 languages. Additional information: The application provides lists of the companies and the number of the companies in each country. Important: This is a paid application. Paid version of BLM-Shipping lists all the vessels in real-time or gives you their details when you specify their number or name. Data concerning the vessels are updated as soon as they reach the specified locations. It is possible to get data about the

vessels and see it on a map. The data are presented in a list or by various sorts of data, including text, txt, bitmap, bmp, html, pdf, csv, txt list, rtf list, json, etc. BLM - Shipping is an advanced shipping manager. The application allows to have direct links to a database of vessels and marine traffic data. The application gives you a more rapid and comfortable
